

## Second #IMAwebinars2021 4<sup>th</sup> June 2021

In pandemic time the home becomes the main place to feel safe. The impossibility of meeting freely has forced us to live locked up and for this reason the house is rediscovered and becomes the main asset in which to invest to ensure that it is ever more welcoming and comfortable.

Hence the strong push to the home sector which has involved many companies all over the world starting from the first months of last year.

Also for IMA the sale of spreaders in H340 has grown in this year and is continuing to record a considerable increase.

For this reason, for the second webinar of the #IMAwebinars2021 cycle, we have decided to consider the Home Textile sector and to present the technological solutions that IMA proposes for the handling and spreading of household linen (tablecloths, curtains and sheets) and for the spreading and cutting of foam material with a specially designed and dedicated line.

Stay connected and don't miss this free online event!

Soon more information on the event and the opportunity to register for the second #IMAwebinars2021.
